

## Corrigendum

A change has been made to one of the figures since the publication of the original version of the report. Please note that the version of the ebook on the iLibrary takes into account the change below.

### Page 29:

Figure 1.2 has been changed as follows:

Figure 1.2. Active life expectancy<sup>a</sup> at the age of 50, by gender, European countries, 2010

a) Life-years with some activity limitations are estimated on the basis of modelled probabilities of experiencing different states of health. Due to the lack of satisfactory longitudinal data, a logistic parameterisation of probabilities of the various states on the basis of available cross-sectional data is used. The healthy life expectancy is then derived as the difference from the total life expectancy.
