Note: Please refer to "Sources and Notes" in the Introduction. Import prices derived from Eurostat Trade Statistics, converted by IEA into US dollars per MBtu. In 2009 edition the IEA changed the way it calculates European Union member states' natural gas import prices. From January 2005 onwards, the import prices are now derived by dividing values in euros by quantities reported in terajoules. These are then converted to national currency per Mbtu. Prior to January 2005, import prices are derived from dividing values in euros by quantities reported in kilograms, which are then converted to national currency per MBtu. Please note that this has led to small revisions in the time series.

Data are from secondary sources for which the IEA is not responsible.

1. Weighted average based only on all imports for which prices are available. For the European Union, calculated average prices may not be comparable from one month to the other due to differing components. For more information, please consult "Sources and Notes".
