Page 104:

The research in Reference 55 was carried out by the Bank of Thailand, not by the Office of National Higher Education Science Research and Innovation Policy Council.

These findings are in line with the analysis carried out by the Bank of Thailand (เสาวณี จันทะพงษ์ and นางสาวกานต์ชนิต เลิศเพียรธรรม (Chantapong, Saovanee and Kanchanit Lertpienthum), 2018^[55]), which shows that the demand in the Thai labour market is strongest for workers with lower vocational certificates and those with a secondary education or lower level degree, while the supply is highest for individuals with a tertiary education degree.
