

Corrigendum

Page 59:

Figure 2.12. Change in sprawl

The algebraic signs have been inverted. Please see below for the corrected figure.

Figure 2.12. Change in sprawl

Notes: This figure shows estimates of the impact of a metropolitan governance body on economic sprawl over a six-year period. Sprawl is defined narrowly as the population density of the built-up area of a city. The estimates are based on a linear regression that controls for country-specific effects and population levels using 204 observations. The difference in sprawl between cities with governance bodies and cities without governance body is significant at the 99% confidence level.
