# **Carbon pricing in Italy**

### Share of greenhouse gas emissions subject to a positive price by instrument, 2018-2021

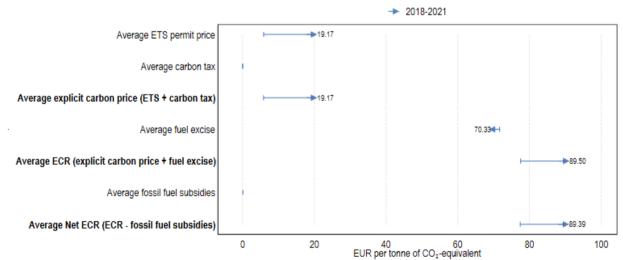

In 2021, explicit carbon prices in Italy consist of emissions trading system (ETS) permit prices, which cover 36.2% of greenhouse gas (GHG) emissions in  $CO_2e$ . In total, 81.8% of GHG emissions in Italy are subject to a positive Net Effective Carbon Rate (ECR) in 2021, unchanged since 2018. Fuel excise taxes, an implicit form of carbon pricing, cover 71.1% of emissions in 2021, unchanged since 2018. Fossil fuel subsidies cover 1% of emissions in 2021, unchanged since 2018.

Note: Percentages are rounded to the first decimal place.

### Average effective carbon prices by instrument, real 2021 EUR, 2018-2021

Explicit carbon prices have increased to an average of EUR 19.17 per tonne of CO  $_2$ e, up by EUR 13.31 (227.1%) since 2018. In 2021, fuel excise taxes amounted to EUR 70.33 on average, down by EUR 1.33 (1.9%) relative to 2018. Fossil fuel subsidies have remained at an average of EUR 0.11 per tonne of CO  $_2$ e.

Note: Prices are rounded to the nearest eurocent.

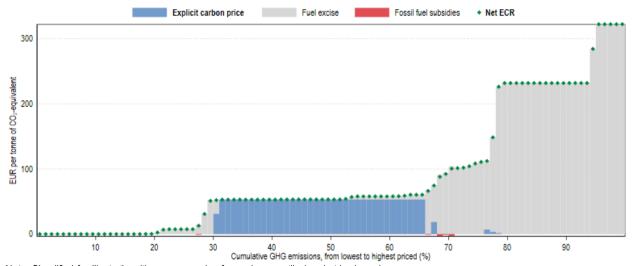

## Percentage change in the average Net ECR by reference price, 2018-2021

The change in carbon prices in Italy was affected by inflation. The average Net ECR on GHG emissions has increased by 15.5% since 2018 when measured in real 2021 euros. In nominal euros, devalued by inflation, the average Net ECR has increased by 18.2% since 2018.

### Distribution of effective carbon prices across GHG emissions, 2021

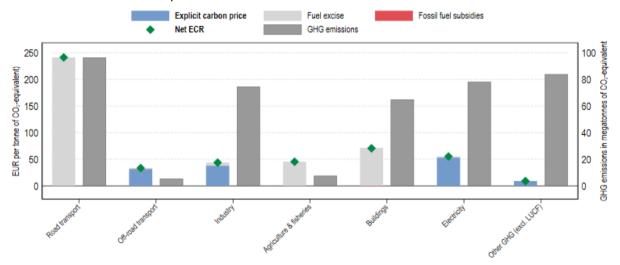

Less than 37.3% of GHG emissions have a Net ECR above EUR 60 per tonne of CO ₂e, a mid-range estimate of current carbon costs.

Note: Simplified for illustration (the average price for each percentile bracket is shown).

### Average effective carbon prices (left axis) and GHG emissions (right axis) by sector, 2021

Net effective carbon rates are highest in the road transport sector, which accounts for 23.5% of the country's total GHG emissions. The Net ECR is positive in all sectors.
