

Argentina

Figure 1. Proportion of CO₂ emissions from energy use subject to different levels of effective carbon rates in Argentina in 2018

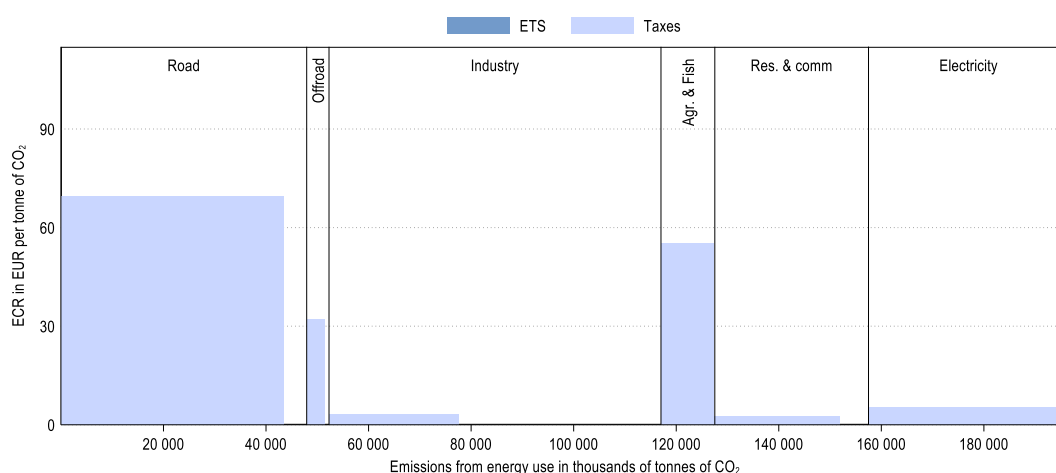

Figure 2. Average effective carbon rates in Argentina by sector and component in 2018

In 2018, effective carbon rates in Argentina consisted of fuel excise taxes and to a smaller extent of explicit carbon taxes. Argentina did not have an emissions trading system. Argentina priced about 74% of its carbon emissions from energy use and about 9% were priced at an ECR above EUR 60 per tonne of CO₂ (see top figure). Emissions priced at this level originated primarily from the road transport sector. The majority of unpriced emissions were from the industry sector and the residential and commercial sector.
