

## Czech Republic

**Figure 1. Proportion of CO<sub>2</sub> emissions from energy use subject to different levels of effective carbon rates in Czech Republic in 2018**

**Figure 2. Average effective carbon rates in Czech Republic by sector and component in 2018**

In 2018, effective carbon rates in Czech Republic consisted of fuel excise taxes and to a smaller extent of permit prices from the EU-ETS. Czech Republic did not have an explicit carbon tax. Czech Republic priced about 79% of its carbon emissions from energy use and about 15% were priced at an ECR above EUR 60 per tonne of CO<sub>2</sub> (see top figure). Emissions priced at this level originated primarily from the road transport sector. The majority of unpriced emissions were from the residential and commercial sector and the industry sector.
