

Greece

Figure 1. Proportion of CO₂ emissions from energy use subject to different levels of effective carbon rates in Greece in 2018

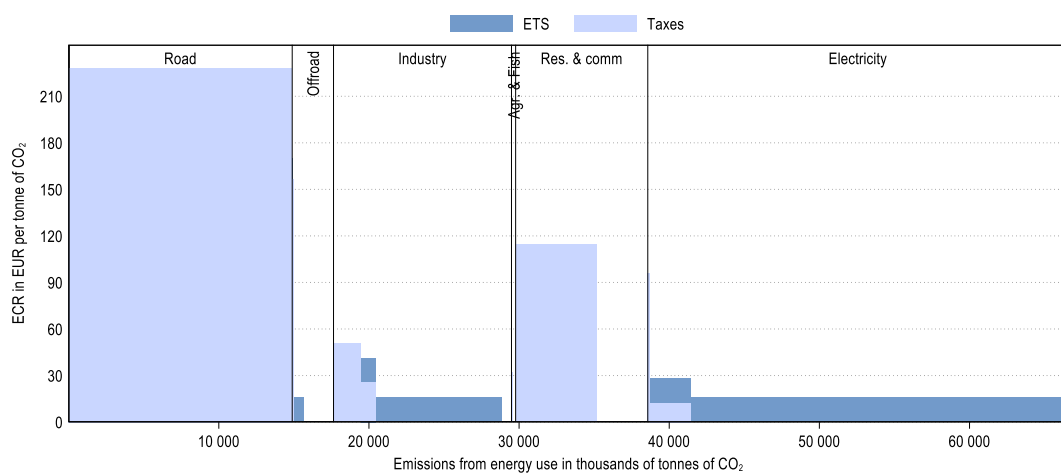

Figure 2. Average effective carbon rates in Greece by sector and component in 2018

In 2018, effective carbon rates in Greece consisted of fuel excise taxes and to a smaller extent of permit prices from the EU-ETS. Greece did not have an explicit carbon tax. Greece priced about 91% of its carbon emissions from energy use and about 30% were priced at an ECR above EUR 60 per tonne of CO₂ (see top figure). Emissions priced at this level originated primarily from the road transport sector. The majority of unpriced emissions were from the residential and commercial sector and the off-road sector.
