

Ireland

Figure 1. Proportion of CO₂ emissions from energy use subject to different levels of effective carbon rates in Ireland in 2018

Figure 2. Average effective carbon rates in Ireland by sector and component in 2018

In 2018, effective carbon rates in Ireland consisted of fuel excise taxes and to a smaller extent of carbon taxes and of permit prices from the EU-ETS. Ireland priced about 92% of its carbon emissions from energy use and about 35% were priced at an ECR above EUR 60 per tonne of CO₂ (see top figure). Emissions priced at this level originated primarily from the road transport sector. The majority of unpriced emissions were from the industry sector and the electricity sector.
