

Mexico

Figure 1. Proportion of CO₂ emissions from energy use subject to different levels of effective carbon rates in Mexico in 2018

Figure 2. Average effective carbon rates in Mexico by sector and component in 2018

In 2018, effective carbon rates in Mexico consisted of fuel excise taxes and to a smaller extent of explicit carbon taxes. Mexico did not have an emissions trading system. Mexico priced about 55% of its carbon emissions from energy use and about 30% were priced at an ECR above EUR 60 per tonne of CO₂ (see top figure). Emissions priced at this level originated primarily from the road transport sector. The majority of unpriced emissions were from the industry sector and the electricity sector.
