

Slovak Republic

Figure 1. Proportion of CO₂ emissions from energy use subject to different levels of effective carbon rates in Slovak Republic in 2018

Figure 2. Average effective carbon rates in Slovak Republic by sector and component in 2018

In 2018, effective carbon rates in Slovak Republic consisted of fuel excise taxes and to a smaller extent of permit prices from the EU-ETS. Slovak Republic did not have an explicit carbon tax. Slovak Republic priced about 72% of its carbon emissions from energy use and about 23% were priced at an ECR above EUR 60 per tonne of CO₂ (see top figure). Emissions priced at this level originated primarily from the road transport sector. The majority of unpriced emissions were from the industry sector and the electricity sector.
