

Pension Country Profile: Ireland

(Extract from the *OECD Private Pensions Outlook 2008*)

The *OECD Private Pensions Outlook 2008* contains a set of country profiles which describe in a concise manner the design of private pension systems in individual OECD countries. This document is an extract from this publication. For further information on the *Outlook*, please see www.oecd.org/daf/pensions/outlook.

Contents

Each Pension Country Profile is structured as follows:

➤ **How to Read the Country Profile**

This section explains how the information contained in the country profile is organised.

➤ **Country Profile**

The country profile is divided into six main sections:

- Demographics and macroeconomics
- Country pension design
- Pension funds data overview
- Reference information
- Overview of private pension system by type of plan and financing vehicle

➤ **Acronyms, Symbols and Conventional Signs**

➤ **Glossary**

How to Read the Country Profiles

This section provides country profiles, describing private pension arrangements in individual OECD countries. Each pension country profile is divided into six main sections:

- Demographics and macroeconomics
- Country pension design
- Pension funds data overview
- Private pension system's key characteristics
- Reference information
- Overview of private pension system by type of plan and financing vehicle

The figure below shows how the first three sections are organised on the first page of each country profile.

5. AUSTRALIA

Series database. Population figures are from the OECD Population and Labour Force database.

Country pension design

This section is split into two parts:

2 Potential average pension benefit

This figure displays a broad estimate of the total pension income which an average-earning individual may receive from various sources (state, mandatory, and voluntary occupational pensions) after a full working lifetime. It is expressed as a percentage of the earnings the pensioner had just before retirement. These figures draw and expand on a microeconomic approach used in the publication *Pensions at a Glance*, looking at future individual pension entitlements under 2004 parameters and rules.

The pension incomes projected here, however, should be considered only as broad indications of what may happen, as they are conditional on a number of assumptions. It is assumed that individuals are covered by public pension plans throughout their careers. For the countries where occupational pension plans are common, average-earning individuals are assumed to be covered throughout their careers by occupational pension plans that are typical of market practice in that country. In countries where private pension accounts are compulsory, they are assumed to have participated in the compulsory system throughout their careers. Those with shorter, or periodically interrupted, careers should expect lower benefits than those which are set out in this figure.

A public pension can be an earnings-related pension (a pension computed by reference to a rate of emoluments, whether actual emoluments or not and whether final or average emoluments), a flat rate pension (a pension payable at a rate fixed otherwise than by reference to a rate of emoluments or to the rate of another pension), a minimum pension (the minimum level of pension benefits the plan pays out in all circumstances), a basic state pension (a non-earnings related pension paid by the State to

Demographics and macroeconomics

1 The first section presents a selection of key demographics and macroeconomics indicators that provide a sense of the size of the country and its economy. GDP figures are from the OECD Reference

individuals with a minimum number of service years), or a means-tested pension (pension granted to a person after examination of his/her financial state).

Data cover public pensions and other mandatory or quasi-mandatory private pension plans. Voluntary plans are also included if they cover at least 30% of the working population. Additional pension income may come from other sources, such as individual savings, but these are not included in the data.

For five countries, several projections are presented as private pension systems are in a particular state of change.

3 Structure of private pension systems

The second part displays a bulleted list summarising the structure of private pension systems according to the pension plans currently in place in the country.

Pension funds data overview

4 The third section presents selected pension fund indicators from 2003 to 2007 from the *OECD Global Pension Statistics* project (www.oecd.org/daf/pensions/gps). For further data and analysis, readers can refer to Chapter 2 of this publication.

Private pension system's key characteristics

The information provided in this section covers eight private pension system key characteristics:

- Overview
- Coverage
- Typical plan design
- Contributions
- Benefits
- Fees
- Taxation
- Market information

Depending on data availability, these characteristics are developed for each existing category of pension plan (mandatory vs. voluntary pension plan, occupational vs. personal pension plan). Information provided in this section refers to December 2007 or to the latest available year.

Reference information

This section includes references to key legislation reforms, provides the name of regulatory and supervisory authorities and displays official statistical references and sources on private pensions.

Overview of private pension systems by type of plan and financing vehicle

This last section gives a detailed description of the various private pension plans found in each country as well as the statistical data coverage of the *OECD Global Pension Statistics*.

The following figure gives an example of such an overview. The first two columns provide the name and the description of each pension plan. Pension plans included in the *OECD GPS database* are marked with a tick in the next column, excluding OECD estimates. Under the column headings “Type of plan” and “Financing vehicle” are given the correspondence of each pension plan with the OECD Classification by funding vehicle and by type (see OECD (2005), *Private Pensions: OECD Classification and Glossary*, OECD, Paris).

Private pension system's key characteristics

Occupational voluntary

Overview

Pension plans in Ireland have historically been defined benefit in nature, but there has been a major shift towards defined contribution. According to the Pensions Board, 68% of occupational voluntary plan members belonged to defined benefit plans in 2006. However, 98% of the total number of occupational voluntary plans are defined contribution in nature.

Coverage

Company pension plans lay down eligibility criteria. Those enrolled in an occupational pension plan cannot take out a retirement annuity contract (RAC) or a personal retirement savings account (PRSA), unless the PRSA is funded by additional voluntary contributions (AVC), or the person has a separate source of earnings, *e.g.* a separate job or income. In 2006 around 55% of the employed population was covered.

Typical plan design

Occupational pension plans can be defined benefit or defined contribution in nature.

A typical defined benefit pension plan would be tied to final average earnings and may have an accrual of 1/60 for each year of service. Employees are generally required to contribute to defined benefit plans.

Average contribution rates to defined contribution plans are approximately 10% of earnings, with employers and employees contributing half each.

Additional voluntary employee contributions are only permitted if the rules of the plan permit AVC. If they do not, then a member has the right to pay AVC to a PRSA.

Benefits usually become payable upon reaching the normal retirement age of 65. Many company pension plans allow employees to take early retirement benefits from age 50. Benefits are paid out as a regular pension, or as a tax-free lump sum and a reduced pension. A plan member with AVC may, if the rules of the plan permit, use their AVC to provide:

- All or part of the tax-free lump sum.
- Additional pension.
- A payment to certain types of pension funds.
- A taxable lump sum.

All benefits paid from a company plan are subject to maximum limits set by the Revenue. Benefits at the normal retirement age may amount to:

- A maximum two-thirds of the member's final salary if he or she has completed 10 years of service.
- A tax-free lump sum of 1.5 times the final salary, if the member has completed 20 years of service and supplemented a reduced pension.

Taxation

Both employers and scheme members receive tax relief on their contributions as they pay them. In addition, the amount the employer pays is not treated as employee earnings for tax purposes. The pension fund pays no tax on the investment income that it makes in

the shape of dividend income and capital gains. Most of the benefits are taxed under the PAYE system. To qualify for beneficial tax treatment, a scheme must be approved by the Revenue Commissioners, who police the maximum benefits that can be provided.

The maximum contribution rate (as a percentage of total pay) on which one can receive tax relief is 15% of total pay for those under age 30, increasing up to 40% of total pay for those aged 60 and over, with the maximum earnings cap set at EUR 262 382. Pensions in payment are taxable as income. National health insurance levies must also be paid.

Personal voluntary

- Personal Retirement Savings Account (PRSA)

Overview

The PRSA is a personal pension contract introduced in 2003. It is a defined contribution type of pension plan that takes the form of a contract between an individual and an authorised PRSA provider.

Coverage

Any individual under the age of 75 can take out a PRSA, irrespective of whether he or she has taxable earnings. This includes employees who are excluded from joining a company pension plan. The PRSA contract may stipulate a minimum age. The normal retirement age is 65 for both men and women. Most pension plans (*i.e.* 82% of defined benefit and 64% of defined contribution plans) set a normal retirement age of 65.

Contributions

Contributions are made by individuals, employers, or both. In the case of “excluded employees”, the employee makes contributions via the employer’s payroll. Employees who participate in a company pension plan may only make contributions to a PRSA if company pension plan rules prohibit them from making additional voluntary contributions.

Benefits

Benefits normally become available between the ages of 60 and 75. They can be claimed upon retirement from employment at age 50 or over, or at any time in the event of serious ill-health. Twenty-five per cent of the PRSA accrued benefits can be paid as a tax-free lump sum (non-AVC PRSAs only). The balance of the fund can be used to purchase a lifetime annuity, receive a tax-free lump sum, or to take benefits from the PRSA and continue to make further contributions.

Taxations

Individual contributions benefit from income tax relief, as do employee contributions made via the employer’s payroll. The tax relief limit varies from 15% of net relevant earnings for those under 30 to 40% of net relevant earnings for those aged 60 and over, with the earnings cap set at EUR 262 382. Limits for tax relief include AVCs to a company pension plan and any contributions paid to an RAC. Investment income is tax exempt. Annuities are subject to PAYE tax. Apart from the tax-free lump sum, benefits are subject to PAYE tax and health levies. Benefits of AVC PRSAs are subject to the rules of the company pension plan, including the tax rules applicable to it.

- Retirement Annuity Contracts (RAC)

Overview

An RAC is a particular type of insurance contract approved by the Revenue. It is a defined contribution type of pension plan.

Coverage

Anyone with earnings can open an RAC, except those who are enrolled in a company pension plan.

Contributions

The RAC policy determines a minimum contribution level for the insured person. Employers may choose to contribute to the RAC.

Benefits

Benefits are payable at any time after age 60 but before age 75. Retirement is not a prerequisite. Upon retirement, 25% of the funds can be paid as a tax-free lump sum, with the remaining funds used to purchase an annuity or paid out as a taxable lump sum.

Taxations

Contributions are tax-exempt up to 15% of net relevant earnings for those under age 30, and up to 40% for those aged 60 and over. The net relevant earnings cap stands at EUR 262 382 and covers both RAC and PRSAs. Employer contributions are taxable on the part of the employee as "benefits in kind". The employee can then claim income tax relief on these contributions as if he or she had paid them. Investment income is exempted from income tax and capital gains tax. Benefits in payment are subject to PAYE tax and health insurance levies.

Market information

Occupational voluntary

Occupational pension schemes take the form of trusts. Upon leaving a company pension plan with a preserved benefit, members may move the value of their benefits to their new employer's pension plan. This plan may be a PRSA for an employee with less than 15 years of service in the company pension plan, and subject to its acceptance by the PRSA provider. Alternatively, an employee may purchase a buy-out bond, which is a life assurance policy designed to receive transfer values from company pension plans. In December 2007 occupational pension plans managed assets worth EUR 86.6 billion (USD 118.6 billion). As of 2007, there was a total active membership of 800 398 in occupational pension plans.

Personal voluntary

Each PRSA offers several investment options, including a legally required default investment option. There are two types of PRSA contract: a standard PRSA, which is a contract that has a maximum fee of 5% on the contributions paid and 1% on assets under management. Investments are only allowed in pooled funds which include unit trusts and life company unit funds. A non-standard PRSA is a contract that does not have maximum limits on fees and/or allows investments in funds other than pooled funds. PRSAs are

transferable and can also be transferred to a company pension plan. Switching fees are prohibited. The total number of PRSA contracts was 130 709. The total value of assets amounted to EUR 1.25 billion.

RACs are offered by insurance companies, which offer different investment options. All RACs taken out after 6 April 1999 can be transferred to another RAC, or paid into a PRSA by mutual agreement between the person and the insurance company concerned.

As of 2005, around 287 000 Irish people were covered by a personal voluntary plan.

Notes

1. Statistics Canada (2004), *Pension Plans in Canada*, Pensions and Wealth Research Series, 1 January.
2. Statistics Canada.
3. The Reserve Fund is established with 5% of the pension company profits.
4. The TFR is a sort of severance pay scheme that the employer has to pay to an employee in the case of his dismissal or retirement. Every month the employer sets aside 6.91% of the gross salary of the employee; every year the accumulated stock of the TFR, which is accounted as a book reserve in the balance sheet of the employer, is appreciated according to a CPI-linked formula.
5. Minimum pension is equivalent to a 1997's monthly minimum wage updated in accordance with inflation.
6. The average monthly wage in Poland is PLN 2 869.69 (USD 1 025) before tax and social security contributions. The net wage is around 70% of the gross.
7. Contribution rates and information on rates of contracting out were obtained from the Department for Work and Pensions' report entitled *Employers' Pension Provision Survey 2005*.

Glossary

Most of the definitions below draw on the publication *Private Pensions: OECD Classification and Glossary*. It can be downloaded at the following address: www.oecd.org/dataoecd/0/49/38356329.pdf.

Term	Definition
Active member	A pension plan member who is making contributions (and/or on behalf of whom contributions are being made) and is accumulating assets or has accrued assets in the past and is not yet retired.
Annuity	A form of financial contract mostly sold by life insurance companies that guarantees a fixed or variable payment of income benefit (monthly, quarterly, half-yearly, or yearly) for the life of a person (the annuitant) or for a specified period of time. It is different from a life insurance contract which provides income to the beneficiary after the death of the insured. An annuity may be bought through instalments or as a single lump sum. Benefits may start immediately or at a pre-defined time in the future or at a specific age.
Asset allocation	The spread of fund investments among different investment forms.
Asset manager	The individual(s) or entity(ies) endowed with the responsibility to physically invest the pension fund assets. Asset managers may also set out the investment strategy for a pension fund.
Basic state pension	A non-earning related pension paid by the State to individuals with a minimum number of service years.
Beneficiary	An individual who is entitled to a benefit (including the plan member and dependants).
Benefit	Payment made to a pension fund member (or dependants) after retirement.
Book reserved pension plans	Sums entered in the balance sheet of the plan sponsor as reserves or provisions for occupational pension plan benefits. Some assets may be held in separate accounts for the purpose of financing benefits, but are not legally or contractually pension plan assets. Most OECD countries do not allow this method of financing. Those that do usually require these plans to be insured against bankruptcy of the plan sponsor through insolvency guaranty arrangement.
Closed pension funds	Funds that support only pension plans that are limited to certain employees (<i>e.g.</i> those of an employer or group of employers).
Contribution	A payment made to a pension plan by a plan sponsor or a plan member.
Contribution rate	The amount (typically expressed as a percentage of the contribution base) that is needed to be paid into the pension fund.
Deferred member	A pension plan member that no longer contributes to or accrues benefits from the plan but has not yet begun to receive retirement benefits from that plan.
Deferred pension	A pension arrangement in which a portion of an employee's income is paid out at a date after which that income is actually earned.
Deferred retirement	A situation when an individual decides to retire later and draw the pension benefits later than their normal retirement age.
Defined benefit (DB) occupational pension plans	Occupational plans other than defined contribution plans. DB plans generally can be classified into one of three main types, "traditional", "mixed" and "hybrid" plans.
"Traditional" DB plan	A DB plan where benefits are linked through a formula to the members' wages or salaries, length of employment, or other factors.

Term	Definition
"Hybrid" DB plan	A DB plan where benefits depend on a rate of return credited to contributions, where this rate of return is either specified in the plan rules, independently of the actual return on any supporting assets (<i>e.g.</i> fixed, indexed to a market benchmark, tied to salary or profit growth, etc.), or is calculated with reference to the actual return of any supporting assets and a minimum return guarantee specified in the plan rules.
"Mixed" DB plan	A DB plan that have two separate DB and DC components but which are treated as part of the same plan.
Defined contribution (DC) occupational pension plans	Occupational pension plans under which the plan sponsor pays fixed contributions and has no legal or constructive obligation to pay further contributions to an ongoing plan in the event of unfavourable plan experience.
Dependant	An individual who is financially dependent on a (passive or active) member of a pension scheme.
Dependency ratio	Typically defined as the ratio of non-active age to those of active age in a given population.
Final average earnings	The fund member's earnings that are used to calculate the pension benefit in a defined benefit plan; it is typically the earnings of the last few years prior to retirement.
Fund member	An individual who is either an active (working or contributing, and hence actively accumulating assets) or passive (retired, and hence receiving benefits), or deferred (holding deferred benefits) participant in a pension plan.
Funded pension plans	Occupational or personal pension plans that accumulate dedicated assets to cover the plan's liabilities.
Funding	The act of accumulating assets in order to finance the pension plan.
Funding level	The relative value of a scheme's assets and liabilities, usually expressed as a percentage figure.
Funding rules	Regulation that requires the maintenance of a certain level of assets in a pension fund in relation to pension plan liabilities.
Gross rate of return	The rate of return of an asset or portfolio over a specified time period, prior to discounting any fees of commissions.
Group pension funds	Multi-employer pension funds that pool the assets of pension plans established for related employers.
Industry pension funds	Funds that pool the assets of pension plans established for unrelated employers who are involved in the same trade or business.
Mandatory contribution	The level of contribution the member (or an entity on behalf of the member) is required to pay according to scheme rules.
Mandatory occupational plans	Participation in these plans is mandatory for employers. Employers are obliged by law to participate in a pension plan. Employers must set up (and make contributions to) occupational pension plans which employees will normally be required to join. Where employers are obliged to offer an occupational pension plan, but the employees' membership is on a voluntary basis, these plans are also considered mandatory.
Mandatory personal plans	These are personal plans that individuals must join or which are eligible to receive mandatory pension contributions. Individuals may be required to make pension contributions to a pension plan of their choice normally within a certain range of choices or to a specific pension plan.
Minimum pension	The minimum level of pension benefits the plan pays out in all circumstances.
Multi-employer pension funds	Funds that pool the assets of pension plans established by various plan sponsors. There are three types of multi-employer pension funds: <i>a)</i> for related employers <i>i.e.</i> companies that are financially connected or owned by a single holding group (group pension funds); <i>b)</i> for unrelated employers who are involved in the same trade or business (industry pension funds); <i>c)</i> for unrelated employers that may be in different trades or businesses (collective pension funds).
Net rate of return	The rate of return of an asset or portfolio over a specified time period, after discounting any fees of commissions.
Normal pension age	Age from which the individual is eligible for pension benefits.
Occupational pension plans	Access to such plans is linked to an employment or professional relationship between the plan member and the entity that establishes the plan (the plan sponsor). Occupational plans may be established by employers or groups thereof (<i>e.g.</i> industry associations) and labour or professional associations, jointly or separately. The plan may be administered directly by the plan sponsor or by an independent entity (a pension fund or a financial institution acting as pension provider). In the latter case, the plan sponsor may still have oversight responsibilities over the operation of the plan.
Open pension funds	Funds that support at least one plan with no restriction on membership.

Term	Definition
Overfunding	The situation when the value of a plan's assets are more than its liabilities, thereby having an actuarial surplus.
Pension assets	All forms of investment with a value associated to a pension plan.
Pension funds	The pool of assets forming an independent legal entity that are bought with the contributions to a pension plan for the exclusive purpose of financing pension plan benefits. The plan/fund members have a legal or beneficial right or some other contractual claim against the assets of the pension fund. Pension funds take the form of either a special purpose entity with legal personality (such as a trust, foundation, or corporate entity) or a legally separated fund without legal personality managed by a dedicated provider (pension fund management company) or other financial institution on behalf of the plan/fund members.
Pension insurance contracts	Insurance contracts that specify pension plans contributions to an insurance undertaking in exchange for which the pension plan benefits will be paid when the members reach a specified retirement age or on earlier exit of members from the plan. Most countries limit the integration of pension plans only into pension funds, as the financial vehicle of the pension plan. Other countries also consider the pension insurance contract as the financial vehicle for pension plans.
Pension plan	A legally binding contract having an explicit retirement objective (or in order to satisfy tax related conditions or contract provisions the benefits cannot be paid at all or without a significant penalty unless the beneficiary is older than a legally defined retirement age). This contract may be part of a broader employment contract, it may be set forth in the plan rules or documents, or it may be required by law. In addition to having an explicit retirement objective, pension plans may offer additional benefits, such as disability, sickness, and survivors' benefits.
Pension plan sponsor	An institution (<i>e.g.</i> company, industry/ employment association) that designs, negotiates, and normally helps to administer an occupational pension plan for its employees or members.
Personal pension plans	Access to these plans does not have to be linked to an employment relationship. The plans are established and administered directly by a pension fund or a financial institution acting as pension provider without any intervention of employers. Individuals independently purchase and select material aspects of the arrangements. The employer may nonetheless make contributions to personal pension plans. Some personal plans may have restricted membership.
Private pension funds	A pension fund that is regulated under private sector law.
Private pension plans	A pension plan administered by an institution other than general government. Private pension plans may be administered directly by a private sector employer acting as the plan sponsor, a private pension fund or a private sector provider. Private pension plans may complement or substitute for public pension plans. In some countries, these may include plans for public sector workers.
Projected Benefit Obligation (PBO)	The actuarial present value of vested and non-vested benefits attributed to the plan through the pension benefit formula for service rendered to that date based on employees' future salary levels.
Protected pension plan	A plan (personal pension plan or occupational defined contribution pension plan) other than an unprotected pension plan. The guarantees or promises may be offered by the pension plan/fund itself or the plan provider (<i>e.g.</i> deferred annuity, guaranteed rate of return).
Public pension funds	Pension funds that are regulated under public sector law.
Public pension plans	Social security and similar statutory programmes administered by the general government (that is central, state, and local governments, as well as other public sector bodies such as social security institutions). Public pension plans have been traditionally PAYG financed, but some OECD countries have partial funding of public pension liabilities or have replaced these plans by private pension plans.
Rate of return	The income earned by holding an asset over a specified period.
Replacement rate	The ratio of an individual's (or a given population's) (average) pension in a given time period and the (average) income in a given time period.
Separate accounts	A pension fund that is legally segregated from both the plan sponsor and a financial institution that acts as the manager of the fund on behalf of the plan member.
Single employer pension funds	Funds that pool the assets of pension plans established by a single sponsor.
Trust	A legal scheme, whereby named people (termed trustees) hold property on behalf of other people (termed beneficiaries).
Trustee	A person or a company appointed to carry out the tasks of the trust.
Underfunding	The situation when the value of a plan's assets are less than its liabilities, thereby having an actuarial deficiency.

Term	Definition
Unfunded pension plans	Plans that are financed directly from contributions from the plan sponsor or provider and/ or the plan participant. Unfunded pension plans are said to be paid on a current disbursement method (also known as the pay as you go, PAYG, method). Unfunded plans may still have associated reserves to cover immediate expenses or smooth contributions within given time periods. Most OECD countries do not allow unfunded private pension plans.
Unprotected pension plan	A plan (personal pension plan or occupational defined contribution pension plan) where the pension plan/fund itself or the pension provider does not offer any investment return or benefit guarantees or promises covering the whole plan fund.
Voluntary contribution	An extra contribution paid in addition to the mandatory contribution a member can pay to the pension fund in order to increase the future pension benefits.
Voluntary occupational pension plans	The establishment of these plans is voluntary for employers (including those in which there is automatic enrolment as part of an employment contract or where the law requires employees to join plans set up on a voluntary basis by their employers). In some countries, employers can, on a voluntary basis, establish occupational plans that provide benefits that replace at least partly those of the social security system. These plans are classified as voluntary, even though employers must continue sponsoring these plans in order to be exempted (at least partly) from social security contributions.
Voluntary personal pension plans	Participation in these plans is voluntary for individuals. By law individuals are not obliged to participate in a pension plan. They are not required to make pension contributions to a pension plan. Voluntary personal plans include those plans that individuals must join if they choose to replace part of their social security benefits with those from personal pension plans.
