

# **RESULTS FROM TALIS 2018**

The OECD Teaching and Learning International Survey (TALIS) is an international, large-scale survey of teachers, school leaders and the learning environment in schools. This note presents findings based on the reports of lower secondary teachers and their school leaders in mainstream public and private schools.

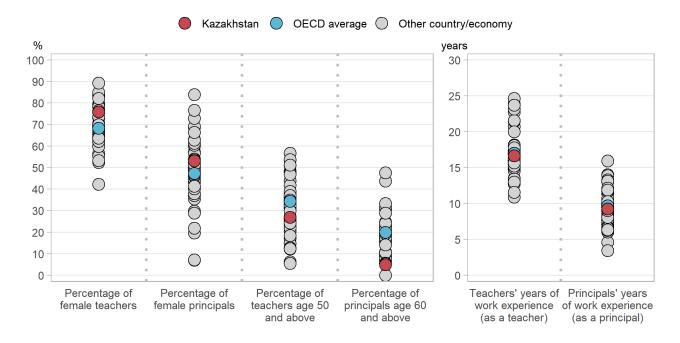

### Kazakhstan

### Who are today's principals and teachers and the students in their classrooms?

- Teaching was the first-choice career for 75% of teachers in Kazakhstan and for 67% in OECD countries
  and economies participating in TALIS. In terms of why they joined the profession, at least 93% of
  teachers in Kazakhstan cite the opportunity to influence children's development or contribute to society
  as a major motivation.
- In Kazakhstan, teachers are, on average, 41 years old, which is lower than the average age of teachers
  across OECD countries and economies participating in TALIS (44 years old). Furthermore, 27% of
  teachers in Kazakhstan are aged 50 and above (OECD average 34%). This means that Kazakhstan
  will have to renew about one out of four members of its teaching workforce over the next decade or
  so.

Figure 1. Socio-demographic and experience profiles of teachers and school leaders

Results based on responses of lower secondary teachers and principals

Note: Only countries and economies with available data are shown. Source: OECD, TALIS 2018 Database, Tables I.3.17, I.3.21, I.3.1, I.3.5, I.3.9 and I.3.13.

- In Kazakhstan, principals are, on average, 48 years old, which is lower than the average age of principals across OECD countries and economies participating in TALIS (52 years old). Furthermore, 5% of principals in Kazakhstan are aged 60 and above, compared to 20% on average across the OECD.
- Information about the gender distribution of the teacher and principal workforces makes it possible to gauge the degree of gender imbalance in the teaching profession and of gender disparities in the scope for promotion to leadership positions. In Kazakhstan, only 53% of principals are women, compared to 76% of teachers. This can be benchmarked against the OECD averages of 47% of women among school leaders and 68% among teachers.
- In terms of classroom environments, relations between students and teachers are positive overall, with 97% of teachers in Kazakhstan agreeing that students and teachers usually get on well with each other. However, 1% of principals report regular acts of intimidation or bullying among their students, which is lower than the OECD average (14%).
- In Kazakhstan, 5% of teachers work in schools where at least 10% of the students have a migrant background (OECD average 17%). At the same time, 94% of school leaders report that their teachers believe that children and young people should learn that people of different cultures have a lot in common (OECD average 95%).

### What practices are teachers using in the classroom?

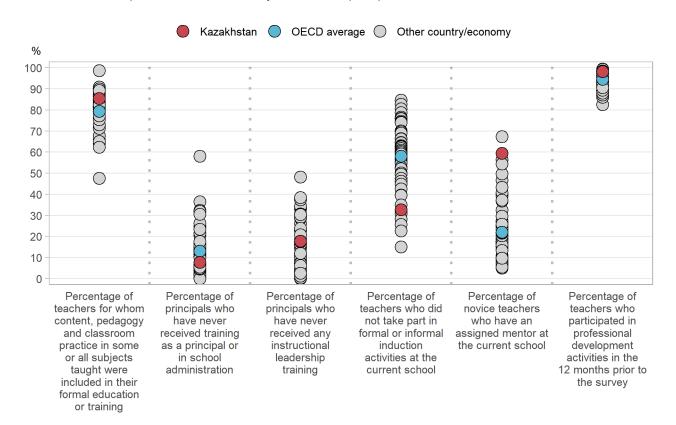

- Among the range of instructional practices TALIS asks teachers about, those aimed at enhancing classroom management and clarity of instruction are widely applied in Kazakhstan, as well as across the OECD countries and economies participating in TALIS. For instance, in Kazakhstan, 42% of teachers report frequently calming students who are disruptive (OECD average 65%) and 92% report frequently explaining how new and old topics are related (OECD average 84%).
- Practices involving student cognitive activation, which are known to be important for student learning, are less widespread, with about half of teachers using these methods across the OECD. Specifically, in Kazakhstan, 75% of teachers report frequently asking students to decide on their own procedures for solving complex tasks, compared to 45% on average across the OECD.
- During a typical lesson, teachers spend 79% of classroom time on actual teaching and learning, on average in Kazakhstan, which is higher than the OECD average of 78%.
- In the past five to ten years, classroom time spent on actual teaching and learning has decreased in about half of the countries and economies participating in TALIS.
- In Kazakhstan, 87% of teachers routinely assess their students' progress by observing them and providing immediate feedback (OECD average 79%), while 51% of teachers report administering their own assessments to their students (OECD average 77%) and 74% of teachers frequently let students evaluate their own progress (OECD average 41%).
- Overall, a vast majority of teachers and school leaders view their colleagues as open to change and their schools as places that have the capacity to adopt innovative practices. In Kazakhstan, 93% of teachers also report that they and their colleagues support each other in implementing new ideas. This is higher than the average share across the OECD countries and economies participating in TALIS (78%).

#### How are teachers and school leaders trained?

- During their initial education and training, 85% of teachers in Kazakhstan were instructed on subject content, pedagogy and classroom practice – a share that is higher than the average of OECD countries and economies participating in TALIS (79%). In Kazakhstan, 67% of teachers report having participated in some kind of formal or informal induction when they joined their current school, compared to 42% of teachers across OECD countries and economies participating in TALIS.
- While school principals across the OECD generally consider mentoring to be important for teachers' work and students' performance, 22% of novice teachers (with up to 5 years of experience) have an assigned mentor. In Kazakhstan, this share amounts to 59%.
- On average across the OECD, school leaders usually have a higher level of educational attainment than teachers. However, only half of them complete a training course or programme for principals at least once before taking up their position as principal. In Kazakhstan, 25% of school leaders have completed a programme or course in school administration or training for principals (OECD average 54%), and 25% have completed an instructional leadership training programme or course (OECD average 54%), before taking up their position as principal.

- Taking part in some kind of in-service training is commonplace among teachers and principals in Kazakhstan, with 98% of teachers (OECD average 94%) and 100% of principals (OECD average 99%) attending at least one professional development activity in the year prior to the survey.
- Attending courses and seminars is one of the most popular types of professional development for teachers across the OECD. In Kazakhstan, 89% of teachers participate in this kind of training, while 94% of teachers participate in training based on peer learning and coaching. It is interesting to note that teachers, across the OECD, report that professional development based on collaboration and collaborative approaches to teaching is among the most impactful for them.
- Teachers in Kazakhstan appear satisfied with the training they received, as 86% report that it had a positive impact on their teaching practice, a share that is higher than the average of OECD countries and economies participating in TALIS (82%). It is also true that teachers who report participating in such impactful training tend to display higher levels of self-efficacy and job satisfaction.
- But some areas of professional development are still lacking, according to teachers. Across the OECD, developing advanced ICT skills is one area in which teachers say that they need more training, along with teaching in multicultural/multilingual settings and teaching students with special needs. Among these three areas, teachers in Kazakhstan expressed a higher need for training in ICT for teaching.

## **Teaching ICT**

- On average in Kazakhstan, 66% of teachers "frequently" or "always" let students use ICT for projects or class work, which is higher than the average of OECD countries and economies participating in TALIS (53%).
- In Kazakhstan, 75% of teachers reported that the "use of ICT for teaching" has been included in their formal education or training, while 69% of teachers on average felt prepared for the use of ICT for teaching when they finished their studies.
- Furthermore, although 90% of teachers on average participated in professional development activities including "use of ICT for teaching" in the 12 months prior to the survey, training in "use of ICT for teaching" is the professional development topic with the highest percentage of teachers reporting a high need for it 30% in Kazakhstan (compared to 18% across the OECD).
- On average in Kazakhstan, 45% of school principals report that delivery of quality instruction in their school is hindered by a shortage or inadequacy of digital technology for instruction (compared to 25% across the OECD).

## **Key features of TALIS 2018**

TALIS uses questionnaires administered to teachers and their school principals to gather data. Its main goal is to generate internationally comparable information relevant to developing and implementing policies focused on school leaders, teachers and teaching, with an emphasis on those aspects that affect student learning. It gives a voice to teachers and school leaders, allowing them to provide input into educational policy analysis and development in key areas.

First, TALIS helps policy makers to review and develop policies that promote the teaching profession and the best conditions for effective teaching and learning. Second, TALIS helps teachers, school leaders, and education stakeholders to reflect upon and discuss their practice and find ways to enhance it. Third, TALIS builds upon past research, while informing the future work of researchers.

- Nine main themes were selected for inclusion in the TALIS 2018 survey: teachers' instructional
  practices; school leadership; teachers' professional practices; teacher education and initial
  preparation; teacher feedback and development; school climate; job satisfaction; teacher human
  resource issues and stakeholder relations; and teacher self-efficacy. Two cross-cutting themes were
  added to this list: innovation; and equity and diversity.
- The international target population for TALIS is composed of lower secondary teachers and their school leaders in mainstream public and private schools. TALIS 2018 offered three additional options: 15 countries and economies also surveyed teachers and school leaders in their primary schools (ISCED level 1), 11 countries and economies did so in their upper secondary schools (ISCED level 3) and 9 countries and economies conducted the survey in schools that participated in the 2018 OECD Programme for International Student Assessment (PISA).
- In each country, a representative sample of 4 000 teachers and their school principals from 200 schools
  was randomly selected for the study. Across all survey components, approximatively 260 000 teachers
  responded to the survey, representing more than 8 million teachers in 48 participating countries and
  economies. In Kazakhstan, 6 566 lower secondary teachers and 331 principals completed the TALIS
  questionnaires.
- TALIS 2018 findings will be released in two volumes. The first volume, Teachers and School Leaders
  as Lifelong Learners, published on 19 June 2019, explores the knowledge and skills dimension of
  teachers and school leaders' professionalism. The second volume, Teachers and School Leaders as
  Valued Professionals, to be published in early 2020, will focus on prestige, career opportunities,
  collaborative culture and responsibility and autonomy.

This work is published under the responsibility of the Secretary-General of the OECD. The opinions expressed and arguments employed herein do not necessarily reflect the official views of OECD member countries.
