

# El Salvador

## The public sector in El Salvador is one of the smallest of the LAC region

In 2014, the Salvadoran government collected about 18% as a share of GDP on revenues, the third lowest in the LAC region. Amounting to 8.3% of total employment, public employment was the second-lowest in the region compared to a regional average of 12%. Of the total budget, only 9.5% was spent on social benefits, compared to a regional average of 24.6%. Improving the quality of public services and ensuring that they reach the poorest segments of the population would require strengthening public institutions, for example by making sure that sufficient human and financial resources are available.

Chapter 3: Public employment

[3.1. Public sector employment as a percentage of total employment, 2009 and 2014](#)

## El Salvador has achieved significant progress in human resources (HR) planning of the public sector

El Salvador achieved the largest increase in the region on the HR planning index score between 2004 and 2012, from 7/100 to 40/100, significantly above the average regional increase (from 31/100 to 42/100). Among other things, the index measures an organisation's priorities and strategic orientation as a way to determine staffing needs, personnel information systems, degree of over/understaffing per institution, personnel technical skills, etc. The increase could be partly explained by the update of the job descriptions used by the central administration. However, more needs to be done to ensure real strategic thinking in HR planning by focusing on forecasting the right mix of employee skills that will be needed to respond to citizens' demands.

Chapter 6: Human Resources Management

[6.1. HR planning in the public sector \(2004 and 2012-2015\)](#)

## While El Salvador has introduced initiatives related to open government, is one of the few LAC countries without an open government data portal

Along with 38% of LAC countries, El Salvador incorporates open government initiatives in other government strategies. As such, it has taken steps to increase transparency, guarantee accessibility of government services and information, and ensure responsiveness to new ideas, demands and needs. However, there is room for further progress, since El Salvador is among the few LAC countries that have not yet established a single point of access (open data portal) for government datasets.

### Notes

\* Government investment figures for El Salvador refer to 2013. Tax revenues for El Salvador exclude local government revenues. Public sector employment as % of total employment, public sector employment filled by women and government procurement data for El Salvador are for 2013. Costs of goods and services financed by general government are not included in government procurement because they are not accounted separately in the IMF Government Finance Statistics (database). *OURdata* Index: El Salvador does not have a one stop shop portal.

## Government at a Glance: Latin America and the Caribbean 2017

*Government at a Glance: Latin America and the Caribbean 2017* is the second edition of a joint publication between the Organization for Economic Co-operation and Development (OECD) and the Inter-American Development Bank (IDB). It provides readers with a dashboard of key indicators to inform policy making and benchmark specific interventions. The model is the OECD *Government at a Glance*, which is a fundamental reference, backed by a well-established methodology for OECD member countries. Compared to the previous edition that had a special focus on Public Financial Management and alongside with indicators on public finances and public employment this second version covers a wider range of public management areas including the role and influence of the Centre of Government, Open Government and Open Data policies, Digital Government, Regulatory Governance and practices for Budgeting in health systems.
