

### **Mexico spends a relatively low share of its government budget on social benefits**

In 2014, government expenditure was only 27.9% of GDP in Mexico, below the LAC (33%) and OECD (41.5%) averages. During the same year, Mexico spent 9.3% of its government budget on social benefits, the second-lowest ratio in the LAC region, where the average reached 24.6%. Moreover, taxes and transfers have limited distributional potential, reducing Mexico's Gini coefficient (0.51) by only 2 percentage points. Mexico needs to sustain efforts to achieve inclusive growth, and guarantee that benefits from growth spread evenly across the population, especially considering the relatively low share of expenditure on social benefits.

Chapter 2: Public finance and economics

[2.19. Structure of general government expenditures by economic transaction, 2014 and change 2007 to 2014](#)

### **Mexico has been very active in making government data available to the public**

Mexico has issued an Open Data Executive Decree, deployed a fully functional central open government data portal, established regulatory and technical support bodies and guidelines, and launched initiatives to make public institutions and data users collaborate to find solutions to public issues. These federal initiatives have been complemented by activities at the local level. As a result, in 2015, the value of the composite index on openness, usefulness and reusability (*OURdata* index) of data in Mexico (0.65/1) was the third highest of the LAC region and above the regional (0.43/1) and OECD (0.56/1) averages. However, to fully reap the benefits of open data, public institutions need to align with the federal government's vision for open data by disclosing data consistently, consulting data users regularly, and enabling data requests and co-creation of data, services and products via the central OGD portal.

Chapter 8: Digital and open government

[8.21. \*OURdata\* Index: Open, Useful, Reusable Government Data, 2015](#)

### **Mexico is at the forefront of engaging stakeholders in the design and implementation of regulations**

The OECD composite index on stakeholder engagement measures the extent to which those subject to regulations - citizens, businesses, civil society or other members of the community - are engaged in the process of developing regulations. Consultation practices are well-established: all draft regulations are published for comments alongside the corresponding regulatory impact assessment on the website of the Federal Commission for Regulatory Improvement (CONFEMNER) for a minimum of 30 working days. In 2015, among LAC countries with available information, Mexico (3.65/4) scored first on the stakeholder engagement index, above the regional (2.05) and OECD (1.6) averages.

### Notes

\* Government investment data for Mexico refer to 2013 and are based on the OECD National Accounts. Tax revenue data for Mexico on payroll, property, goods and services and others are for 2013. Government procurement data for Mexico are for 2013. Costs of goods and services financed by general government are not included in government procurement because they are not accounted separately in the IMF Government Finance Statistics (database). *OURdata* index: Data for Mexico are for 2014.

## Government at a Glance: Latin America and the Caribbean 2017

*Government at a Glance: Latin America and the Caribbean 2017* is the second edition of a joint publication between the Organization for Economic Co-operation and Development (OECD) and the Inter-American Development Bank (IDB). It provides readers with a dashboard of key indicators to inform policy making and benchmark specific interventions. The model is the OECD *Government at a Glance*, which is a fundamental reference, backed by a well-established methodology for OECD member countries. Compared to the previous edition that had a special focus on Public Financial Management and alongside with indicators on public finances and public employment this second version covers a wider range of public management areas including the role and influence of the Centre of Government, Open Government and Open Data policies, Digital Government, Regulatory Governance and practices for Budgeting in health systems.
