

Gap analysis of training needs in Slovakia

Public Procurement Principle: **Capacity**

Procurement Stage: **All stages**

Audience: **Policy makers, Procuring entity**

Description

To develop a training action plan to strengthen the capacities of the procurement workforce in the Slovak Republic, a gap analysis was conducted using a questionnaire that sought to capture the current training situation. The questionnaire focused on three dimensions, each identified as being significant in determining the capability of the procurement workforce. Sample questions have been provided for each of the three dimensions below:

- Characteristics of the procurement workforce:
 - Is the procurement workforce clearly identified?
 - How is the workforce composed?
 - What is the typology of the public procurement workforce in terms of professional experience?
- The performance of the procurement system:
 - What is the share of procurement operations subject to open tender?
 - How many instances are there of irregularities leading to financial corrections?
 - What are the main grounds for objections and complaints?
 - Which secondary policy objectives are most frequently implemented (green procurement, innovation, support to SMEs, etc.)?
- The training system in place:
 - Are there eligibility criteria for training participants?
 - How visible are training opportunities to staff members?
 - Are training courses structured according to seniority or according to different roles in procurement lifecycle?
 - What subjects are currently included in the training curriculum?

- What types of delivery models are available (in-class, e-learning, distance learning) and are classes a mix of theory and practical?
- What is the frequency of trainings and are there mandatory hours/events for staff to attend?
- Is feedback collected from training participants? This analysis enabled a thorough assessment of the existing training on offer, its content and structure, and perceptions both from trainers and trainees' perspectives.

Fifty responses were gathered from trainers and participants, allowing for the identification of areas in greatest need of focus. Thirty-five individuals from 20 different entities were interviewed to discuss responses in more detail and investigate further training needs.
