

### Snapshot of students' engagement, drive and self-beliefs

Countries/economies with values above the OECD average  
 Countries/economies with values not statistically significantly different from the OECD average  
 Countries/economies with values below the OECD average

Values that are statistically significant are indicated in bold or with the symbol √.

Mean mathematics score	Engagement with and at school				Drive				Mathematics self-beliefs			
	Percentage of students who reported having skipped classes or days of school	Score-point difference that is associated with students skipping classes or days of school			Socio-economic disparities in sense of belonging among students of equal performance in mathematics	Openness to problem solving	Score-point difference per unit of the index of openness to problem solving	Gender gap in openness to problem solving among students of equal mathematics performance	Socio-economic disparities in openness to problem solving among students of equal mathematics performance	Mathematics self-efficacy	Score-point difference per unit of the index of mathematics self-efficacy	Gender gap in mathematics self-efficacy among students of equal mathematics performance
