Japan	Monthly	TL1, TL3	e-Stat Portal Site of Official Statistics of Japan <a href="#">月報</a> and <a href="#">速報</a>
Mexico	Daily	TL1, TL2, TL3	Secretaría de Salud <a href="#">Bases de datos del boletín estadístico sobre el exceso de mortalidad en México</a>  INEGI <a href="#">Defunciones registradas (Microdatos)</a>
New Zealand	Quarterly	TL1, TL2	Stats NZ <a href="#">Table VSD016AA</a>

Country or region	Frequency	Geography	Source
United States	Weekly	TL1, TL2	Centers for Disease Control and Prevention <a href="#">Weekly Counts of Deaths by State and Select Causes, 2014-2019</a> <a href="#">Weekly Provisional Counts of Deaths by State and Select Causes, 2020-2021</a>
United Kingdom	Monthly	TL2	ONS <a href="#">Deaths registered monthly in England and Wales</a>  National Records of Scotland <a href="#">Table 4 Deaths in Scotland by month of registration and council area, 1996 to 2021</a>  NISRA <a href="#">Monthly Deaths</a>

### Notes

When unavailable, monthly death counts are aggregated from weekly or monthly death counts. In the case of New Zealand, monthly death counts correspond to the quarterly death counts divided by three.

#### *Australia*

Doctor-certified deaths, on the date in which the death occurred, by place of death.

#### *Canada*

The geographic distribution of deaths is based on the place of death. Limited to residents of Canada. The data for the 2018 to 2020 reference years are provisional.

#### *Chile*

Mortality data is treated and collected by the Ministerio de Ciencia, Tecnología, Conocimiento e Innovación based on deaths reported to the National Registry office. These are provisional and have not been verified by the National Statistics Office.

The geographic distribution of deaths is based on the place of death. The date of death corresponds to the date the death was reported to the registry's office.

Aggregation to the TL3, TL2 and TL1 level is based on death counts reported at the *comuna* level.

#### *Germany*

Death counts are reported by place of residence. Data from January 1, 2020 are provisional and based on the raw number of deaths reported by registry offices.

#### *Mexico*

Monthly death counts were aggregated from individual-level data. Counts at the TL1 level

correspond to the sum of deaths across 32 TL2 regions.  
Death counts are reported by place of occurrence, at the date of death.

#### *New Zealand*

Deaths data are based on deaths registered in New Zealand to people resident in New Zealand by date of registration.

#### *United States*

Deaths counts are reported by place of occurrence.

#### *United Kingdom*

Information for the United Kingdom comes from three different statistical agencies: ONS, National Records of Scotland and NISRA. The numbers reported at the TL1 level are an aggregate of the three sources.

#### **England and Wales**

Deaths registered by area of usual residence.

#### **Scotland**

Vital events information is based on the date of registration, not the date on which the event occurred.

#### **Northern Ireland**

Provisional death statistics are based on death registration information collected by the General Register Office.
