

## Carbon pricing in Bangladesh

### Share of greenhouse gas emissions subject to a positive price by instrument, 2018-2021

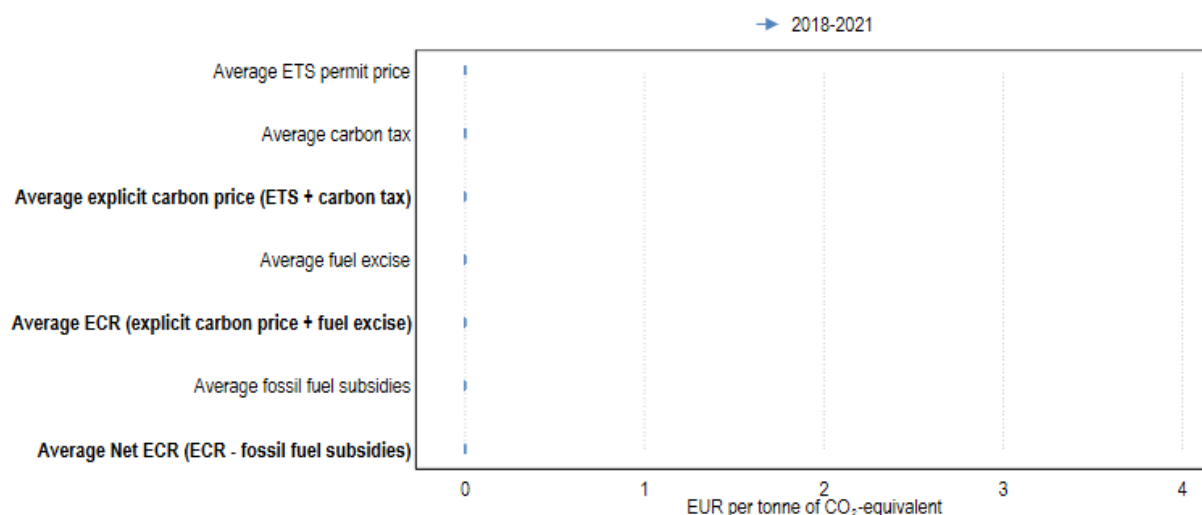

In total, 0% of GHG emissions in Bangladesh are subject to a positive Net Effective Carbon Rate (ECR) in 2021, unchanged since 2018. Bangladesh does not levy an explicit carbon price. No fuel excise taxes are levied. Fossil fuel subsidies cover 26.1% of emissions in 2021, unchanged since 2018.

Note: Percentages are rounded to the first decimal place.

### Average effective carbon prices by instrument, real 2021 EUR, 2018-2021

In 2021, fuel excise taxes were zero. Fossil fuel subsidies were nearly zero (not visible in the figure due to rounding).

Note: Prices are rounded to the nearest eurocent.

### Percentage change in the average Net ECR by reference price, 2018-2021

The change in carbon prices in Bangladesh was affected by exchange rate depreciation and inflation. The average Net ECR on GHG emissions has decreased by 128.7% since 2018 when measured in real 2021 euros. In real Bangladeshi takas (BDT), which has depreciated relative to the euro between 2018 and 2021, the average Net ECR has decreased by 137.4%. In nominal BDT, devalued by inflation, the average Net ECR has decreased by 180% since 2018. As the net ECR in 2018 was negative, percentage changes have to be interpreted with caution.

### Distribution of effective carbon prices across GHG emissions, 2021

No GHG emissions have a Net ECR above EUR 60 per tonne of CO<sub>2</sub>e, a mid-range estimate of current carbon costs.

Note: Simplified for illustration (the average price for each percentile bracket is shown).

### Average effective carbon prices (left axis) and GHG emissions (right axis) by sector, 2021

The Net ECR is zero or negative in all sectors.
